

FARUK ZAHRA

SENIOR FULLSTACK ENGINEER

JAVA | SPRING | JAVASCRIPT | TYPESCRIPT | AI AGENTS

✉ farukz@gmail.com

📍 Curitiba, PR, Brazil

🌐 linkedin.com/in/farukz

📁 My Projects

🔧 CORE SKILLS

- Java
- Spring Boot
- Spring Cloud
- REST APIs
- Microservices
- Google Cloud Platform
- AWS
- Azure
- Vue.js
- TypeScript
- Node.js
- PostgreSQL
- Docker
- Git
- JUnit
- Mockito
- Liquibase
- Elasticsearch
- CI/CD
- Cursor
- Claude
- Codex
- GitHub Copilot
- Software Architecture
- System Design

🌐 LANGUAGES

Portuguese – Native

English – Professional Working

Arabic – Elementary

🎓 CERTIFICATIONS

- Oracle Certified Professional, Java EE 5 Web Component Developer
- Oracle Certified Professional, Java SE 6 Programmer
- IBM Certified Associate Developer – Lotus Notes and Domino 7

👤 SUMMARY

Senior Software Engineer with 20+ years of experience designing, building, and maintaining enterprise applications using Java, Spring Boot, REST APIs, and cloud-native architectures.

Experienced across backend and full-stack development with Vue.js, TypeScript, Node.js, relational databases, and distributed systems.

Strong background in software architecture, API design, system integration, performance optimization, and delivering scalable solutions throughout the entire software development lifecycle.

Experienced using AI coding agents to accelerate implementation, refactoring, and day-to-day software delivery.

📁 EXPERIENCE

🕒 AI Engineering Projects & Generative AI Development | Freelance | Self-Employed

(JUL 2026 – PRESENT)

Remote · Full-time

Designing and developing production-oriented Generative AI solutions, combining more than 20 years of backend engineering experience with modern AI engineering patterns.

Building AI-powered applications using Large Language Models (LLMs), Retrieval Augmented Generation (RAG), AI agents, and cloud-native architectures, focusing on reliable, scalable, and enterprise-ready systems.

- Designed RAG-based architectures using embeddings, vector databases, semantic search, document processing pipelines, and context retrieval strategies.
- Developed AI agent workflows using tool calling, structured outputs, planning patterns, and multi-step task orchestration.
- Built backend integrations between AI systems and enterprise applications through APIs, event-driven architectures, and cloud services.
- Applied AI reliability practices including prompt engineering, evaluation pipelines, hallucination reduction strategies, guardrails, observability, and cost optimization.
- Explored LLMops practices for deploying, monitoring, and improving AI applications in production environments.
- Applied software engineering principles such as clean architecture, scalability, security, automated testing, and distributed systems design to Generative AI solutions.

Technologies: LLMs, Generative AI, RAG, AI Agents, Embeddings, Vector Databases, LangChain, LangGraph, OpenAI APIs, Claude APIs, Python, Java, Spring Boot, REST APIs, Cloud Platforms, Docker, Kubernetes, Observability, Event-Driven Architecture.

🕒 Full Stack Engineer | BairesDev

(MAY 2021 – JUL 2026)

Remote

- Built and maintained a multi-tenant Orders microservice (Java 17, Spring Boot) for a retail e-commerce platform — order lifecycle, payments, fulfillment, and store operations.

- IBM Certified Database Associate – DB2 9 Fundamentals
- SUN CERTIFIED MOBILE APPLICATION DEVELOPER

- Designed contract-first REST APIs with OpenAPI 3, generating Spring interfaces and TypeScript clients for consuming services.
- Implemented event-driven integrations with Google Cloud Pub/Sub (order ingestion, payment updates, POS export results, supplier fulfillment, outbound email).
- Modeled multi-tenant PostgreSQL schemas and Liquibase migrations (orders, transactions, shipments, soft deletes).
- Delivered Elasticsearch-backed order search with indexing, search templates, filters, and aggregations.
- Ran and integrated services on Google Cloud Platform — GKE, Pub/Sub, Cloud SQL, Cloud Storage, and IAM — with OpenFeign between microservices and OAuth2 via the shared security base.
- Built Vue 3 frontend features with TypeScript, Pinia, Vue Router, Axios, and Vite (Composition API with script setup).
- Wrote automated tests across the stack — JUnit 5, Mockito, and MockMvc on the backend; Vitest and Playwright on the Vue frontend.
- Participated in Agile ceremonies, code reviews, and production support.

 Solutions Architect | Lume Tecnologia
(FEB 2008 – APR 2021)
Pinhais, PR

- Led software architecture decisions for enterprise applications.
- Gathered customer requirements and translated them into technical solutions.
- Designed backend systems using Java and Spring Boot.
- Modernized legacy Java EE applications.
- Delivered cloud-hosted solutions on AWS (EC2, S3, RDS, Lambda, IAM) and Azure (App Service, Blob Storage, Azure SQL, Functions, Entra ID).
- Mentored developers and reviewed code quality.
- Delivered solutions using Vue.js, Flutter, PostgreSQL, and Git.

 Java Teacher | Faculdades ESEEI
(FEB 2011 – DEC 2011)
PC60 – Java/Web Programming and PC50 – Java Programming.

 EDUCATION

 Master in Health Technology (PPGTS)
(2007 – 2009)
Pontifícia Universidade Católica do Paraná (PUCPR)
Ontology, Ontology Learning, Java.

 Bachelor of Information Systems
(2001 – 2004)
Pontifícia Universidade Católica do Paraná (PUCPR)

 OTHER EXPERIENCE (PREVIOUS ROLES)

Java Specialist GVT 2007 – 2008	Java Specialist Vivo 2005 – 2007	Java Specialist Visionnaire 2004 – 2005	Java Developer HSBC 2003 – 2004
